

SRRTTF - Green Chemistry Workgroup

Proposed Ideas for SRRTTF-ACE Product Testing funding

1. Contract with a consulting firm (Limnotech?) to perform a basin-wide (Coeur d'Alene to Spokane) survey and PCB study of deicer. The study would gather information from each entity on the type, brand, and amount of deicer applied. Several samples of deicer would be collected and tested for PCBs to understand the range of variability and get a better idea of PCB concentrations.
2. Work with Dr. Xianming Shi, Assoc. Professor in Civil & Environmental Engineering at WSU to complete a road test study of sugar beet deicer within the City of Spokane. (See attachment)
